Endur Spacer

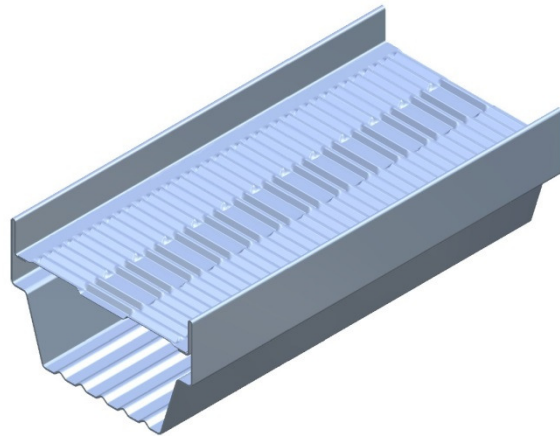

PRODUCT BULLETIN

Cardinal IG Introduces Endur Spacer

Cardinal IG, supplier of insulated glass (IG) for Minnkota Windows, has upgraded their proven XL Edge® spacer to a new warmer edge stainless steel spacer. Endur IG improves sightline temperature by 1-2 degrees and improves the resistance to condensation. The corrugated shape adds strength. Bent corners – not notched or open joints – create a continuous impermeable metal barrier around the entire perimeter, keeping moisture out and argon in. Overlap seams along ears allow breathing. The new spacer is also more aesthetically pleasing. Endur IG improves overall window U-Factor 0.005.

ENGINEERED TO A HIGHER STANDARD

Endur IG is built on the proven technologies that help Cardinal IG units achieve the industry's lowest failure rate – only 0.20% over twenty years – allowing us to offer the industry's only comprehensive 20-year factory warranty, including labor, because endurance is just as important as performance.
